<b>4</b>	<b>Conclusion</b>	<b>6</b>

# 1 Introduction

## 2 Data Description

### 2.1 Response Variable

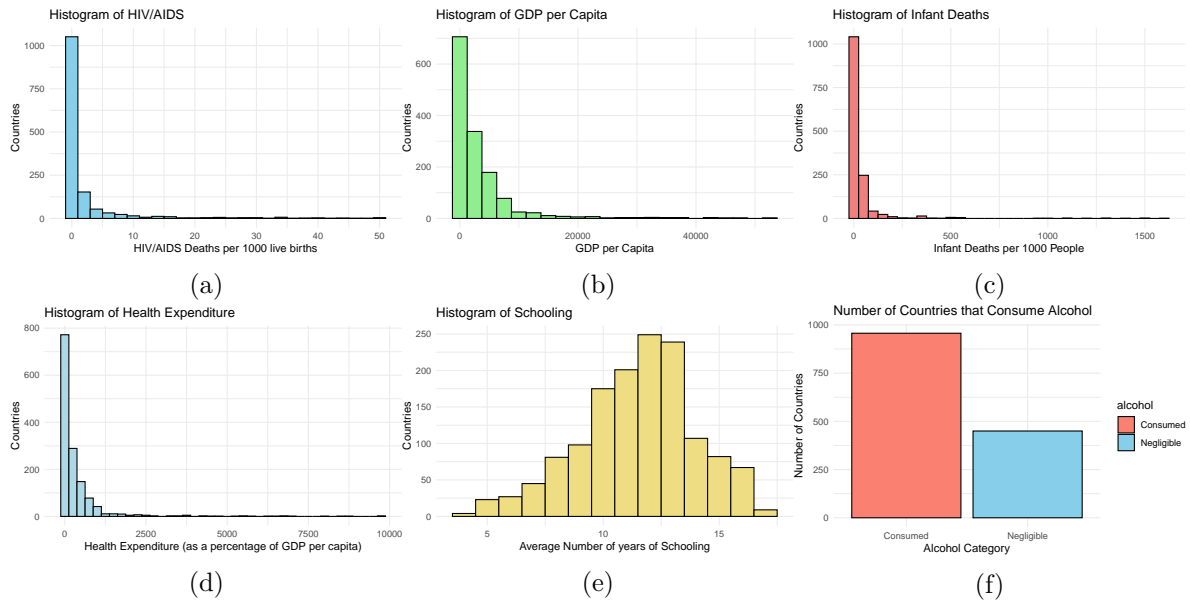

Figure 1

## 2.2 Predictor Variables

	(1)
(Intercept)	49.504
	(0.748)
infant_deaths	−0.002
	(0.001)
hiv_aids	−0.671
	(0.019)
gdp_capita	0.000
	(0.000)
schooling	1.701
	(0.061)
percentage_expenditure	0.001
	(0.000)
alcoholNegligible	−0.670
	(0.286)
Num.Obs.	1407
R2	0.717
R2 Adj.	0.716
AIC	8205.8
BIC	8247.8
Log.Lik.	−4094.887
RMSE	4.44

### 3 Preliminary Results

#### 3.1 Basic Linear Model Summary

Model is Life Expectancy = GDP Per Capita + Infant Deaths (per 1000 people) + HIV/AIDS Deaths (per 1000 live births) + Health Expenditure (as a percentage of GDP per Capita) + Average Number of Years of Schooling + Alcohol Consumption (Negligible Consumption vs. Alcohol is Consumed)

## 3.2 Residual Plots

### 3.2.1 Linear Regression Residual Assumptions:

#### 3.2.1.1 Linearity

#### 3.2.1.2 Normal Errors

#### 3.2.1.3 Constant Variance Assumption

## 4 Conclusion
